ab moviedesk question: What is the difference between these two files? A: In Unix/Linux, there are several different modes: If the two files do not have a file name extension, they are treated as binary. If the two files have a file name extension, they are treated as ASCII. If the two files have a file name extension, and the two files are encoded in the same format, they are treated as MIME (Multipurpose Internet Mail Extensions). So, to answer your question, which mode do the files use: f1 - binary f2 - binary f1.txt - MIME f2.txt - MIME So, how do you tell which format the files are in? The file command has an option for this, which takes the form -t%: file -t:f1 file -t:f2 These commands will return: This is another example of the -t: option. Most of the staff doesn't have a clue where the tens of thousands of dollars they used to make have gone. So, instead of figuring it out, they just did whatever they were told to do. But what happens when a little girl whose entire life is tied up in an institution she can't even leave gets pregnant? That's what happened to Kota, one of my sisters. We found out when she came home from a ten day birthday party and it was time to give her a bath. Instead of throwing her in the bath tub, I held her for five minutes then put her down on her mother's bed. I explained that I was going to give her a bath because the staff didn't know what they were doing. The staff simply told me that I had to bathe Kota and that they would take care of her. So, I put her in the bathtub. I made her dance in the tub while I cleaned her up and washed her hair. It was a fun experience for her. Then, I put her in the shower and got a shampoo from the bathroom cabinet and began to wash her hair. I was amazed at how smooth her hair was. She was never allowed to wash her hair by herself. But I had become very skilled at shampooing her 82157476af
